AVX ACCU-F® THIN-FILM RF / MICROWAVE CAPACITOR

Accu-F® meets the fast-growing demand for low-loss (high-Q) capacitors for use in surface mount technology cially for the mobile communications market, such as cellular radio of 450 and 900 MHz, UHF walkie-talkies, cordless telephones to 2.3 GHz, low noise blocks at 11-12.5 GHz and for other VHF, UHF and microwave applications. Accu-F® is currently unique in its ability to offer very low capacitance values (0.1pF) and very tig capacitance tolerances (±0.05pF). Typically Accu-F® will be used in small signal applications in VCO's, match networks, filters, etc. Inspection test and quality control procedures in accordance with ISO 9001, CECC, IE USA MIL Standards yield products of the highest quality.

AQ SERIES

orcelain and ceramic dielectric multilayer capacitor (MLC) chips are best suited for RF/Microwave
ons typically ranging from 10MHz to 4.2GHz. Characteristic is a fine grained, high density, high purity
material impervious to moisture with heavy internal palladium electrodes.

aracterics lend well to applications requiring:

cations:

urrent carrying capabilities
uality factors
w equivalent series resistance
igh series resonance

- Excellent stability under stresses of changing voltage, frequency, time and temperature
- Temperature Coefficient: (M) +90 ±20PPM°C, (A) ±30PPM°C

KEMET SMD HIGH VOLTAGE CERAMIC CAPACITORS

KEMET's High Voltage Surface Mount Capacitors are designed to withstand high voltage applications. They offer high capacitance with low leakage current and low ESR at high frequency. The capacitors have pure tin (Sn) plated external electrodes for good solderability. X7R dielectrics are not designed for AC line filtering applications. An insulating coating may be required to prevent surface arcing. These components are RoHS compliant.

Applications:

- Switch mode power supply
- Input filter
- Resonators
- Tank circuit
- Snubber circuit
- Output filter
- High voltage coupling
- High voltage DC blocking
- Lighting ballast
- Voltage multiplier circuits
- Coupling capacitors/CUK

KEMET CERAMIC CHIP CAPACITORS

KEMET multilayer ceramic chip capacitors are produced in plants designed specifically for chip capacitors manufacture. The process features a high degree of mechanization as well as precise controls over raw materials and process conditions. Manufacturing is supplemented by extensive Technology, Engineering and Quality Assurance programs.

Features:

- C0G (NP0), X7R, Z5U, and Y5V Dielectrics
- 10, 16, 25, 50, 100 and 200 Volts
- Standard end metalization: Tin-plate over nickel barrier
- Available capacitance tolerances: ±0.10 pF; ±0.25 pF; ±0.5pF; ±1%; ±2%; ±10%; ±20%; and ±80%-20%

Application Note:

- A higher voltage capacitor may be used in a lower voltage application

ERB SERIES MULTILAYER, HIGH FREQUENCY, HIGH Q, LEAD FREE

ERB SERIES: Murata high Q capacitors come with higher Q and lower ESR - better than standard products of equivalent packages. They offer low ESR in the 1 MHz to 1 GHz frequency range. The ERB series of capacitors are designed with precious metal inner electrodes. These surface mount capacitors are available in voltages up to 500V. They are RoHS compliant.

- C0G Dielectric
- Low ESR
- Operating Temperature: -55°C to +125°C

MURATA Hi-Cap Multilayer Ceramic Chip Capacitors

Hi-Cap: The Murata Hi-Cap, Tantalum replacement product lineup is available in X7R, X6S, X7S, and X5R with capacitance of 1uF and larger. This line of high volumetric capacitance ceramic chip capacitors is available in 4V, 6.3V, 10V, 16V, 25V, and 50V. This product series (GRM) is offered with a Nickel (Ni) barrier termination plated with Tin (Sn), and is RoHS compliant. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

Why use ceramic chips over Tantalum and Aluminum capacitors? Ceramic chips offer better reliability, performance, no polarity, and allow design engineers to downsize designs with various package options from 0402 X5R 1uF to 1210 X5R and X6S 100uF. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to Tantalum and Aluminum caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a Tantalum capacitor because impedance (ESR) of MLCC is lower at higher frequencies, above 100kHz. Consider Murata Hi-Cap as your Tantalum capacitor replacement.

Recommended Capacitance of MLCC for Tantalum Cap. Replacement

Depending on the operating frequency, MLCC is equivalent to 1/2 to 1/10 Capacitance value of Tantalum Cap. Because impedance (ESR) of MLCC is lower than Tantalum Cap. Refer to the impedance curve graph below.

Tantalum Cap.	MLCC Recommended C
1μF	0.1 to 0.47μF
2.2μF	0.22 to 1μF
4.7μF	0.47 to 2.2μF
10μF	1 to 4.7μF
22μF	2.2 to 10μF
47μF	4.7 to 22μF
100μF	10 to 47μF
220μF	22 to 100μF

Impedance Curve of MLCC

It is important that capacitor's impedance is lower at ripple noise frequency.

SYFER FLEXICAP™ SMD Ceramic Capacitors

SYFER
SYFER TECHNOLOGY LIMITED
A TTI Company

XICAP™ CERAMIC CAPACITORS

'S FlexiCap™ Ceramic Surface Mount Capacitor technology was developed to provide improved resistance sk of mechanical stress cracking in ceramic chip capacitors.

es:

s a greater degree of PCB deflection, lly twice that of standard MLCC's Cap termination does not affect ical characteristics or performance of evices which can be used with no ges to the manufacturing process resistant to temperature cycling

Specifications:

- Operating range: -55°C to +125°C (max. capacitance change: ±15%)
- Insulation resistance: 100 gigohm or 1000s, whichever is less
- Dissipation Factor: < 0.025
- Dielectric strength with voltage applied for 5 seconds: ≤ 200 Volts: 2.5 times; 500 & 630 Volts: 1.5 times; ≥ 1 kV: 1.25 times

ts:

r Supplies: DC-DC Converters, systems
om: Backplanes, linecards, modems, ase stations
ng ballasts
trial

Applications:

- Can be used in all designs currently using standard MLCC's
- Suggested for high stress, critical circuit applications

C SERIES CERAMIC CHIP CAPACITORS (CONT.)

res:
(NP0), X7R, X5R, and 75V Dielectrics•
capacitance has been achieved through precision technologies
nable the use of multiple thinner ceramic dielectric layers
olithic structure ensures superior mechanical strength and reliability
accuracy automatic mounting is facilitated through the maintenance of very precise dimensional tolerances
posed of only ceramics and metals, these capacitors provide extremely
ndable performance, exhibiting virtually no degradation even when subjected to temperature extremes

DME SERIES - MINIATURE METALLIZED POLYESTER CAPACITORS

Type DME radial-leaded, mini-dipped capacitors deliver the performance of other capacitors which have cases that are twice as big. Improvements in film technology permit the use of thinner dielectric and make DME the choice for all higher current AC applications where the larger size may be an advantage. DME self heals shorts caused by overvoltage transients. For small size and low cost, DME is tops.

Specifications:

- Voltage range: 100-1000VDC (65-250VAC)
- Capacitance range: .01-10μF
- Capacitance tolerance: ± 10%
- Operating temperature range: -55°C to 125°C full-rated voltage @ 85°C - Derate linearly to 50% - rated voltage @ 125°C
- Dielectric strength: 150%
- Dissipation Factor: 1% max.
- Insulation resistance: 3,000MΩ x μF 9,000MΩ min.
- Life test: 1,000 hours at 85°C @ 125% rated voltage

Features:

- Significant size reduction and performance characteristics comparable to other film capacitors that are in larger case sizes
- DME self heals shorts caused by overvoltage transients
- Small size/low cost

VISHAY HPC0402A SERIES HIGH FREQUENCY INTERGRATED SILICON CAPACITORS

High Performance, High Precision

In the last decade or two, semiconductor production has been greatly refined in materials, processes, producibility, cost reduction, repeatability, reliability, and simplicity. In contrast, there have been few significant innovative advances in passive components. So the search for a significant advance in a high Q, high frequency capacitor centered on the semiconductor processes instead of the traditional capacitor processes. The resultant product yields a true RF capacitor with a ten-fold increase in capacitance density based on simple, low cost, high reliability semiconductor processes, and on materials economically available throughout the world.

Features:

- New technology surface mount capacitor based on a special semi-conductor process
- Construction reduces the parasitic inductance and brings the SRF values to ultra-high frequencies
- Capacitance is extremely stable in a wide range of frequencies from 1MHz to several GHz
- High Q and low ESR
- Tight tolerance to ± 1% or 0.05pF
- Ultra high SRF
- Low parasitic inductance
- Capacitance range: 0.1pF to 180pF

AVX Niobium Oxide Capacitors and Supercapacitors

NIOBIUM OXIDE CAPACITORS

rsus performance is a key requirement for consumer electronic products. A new solid electrolyte capacitor OxiCap has been developed by AVX in standard EIA case sizes in order to meet this requirement as a higher ance alternative to aluminum and other SMD capacitor technologies currently on the market. The OxiCap non-burn technology is based on NbO niobium oxide ceramic material as the anodic material processed through e manufacturing process as tantalum capacitors. Electrical parameters are similar to generic standard and low ESR tantalum. The laser coded orange molded body gives total traceability.

BESTCAP SUPERCAPACITORS

Cap™ series of electrochemical supercapacitors offer excellent high power pulse characteristics based upon the combination of very high capacitance and ultra low ESR in the milliohm region. Supercapacitors have rapidly recognized as an excellent compromise between "electronic" capacitors such as ceramic, tantalum, film and aluminum electrolytic, and batteries, but also a technology for providing a unique combination of characteristics, ly very high energy, power and capacitance densities.

KEMET has developed a new type of tantalum capacitor that replaces the solid manganese dioxide electrode with a solid conductive polymer. This product is named the KO-CAP for KEMET Organic Capacitor. The advantages of the polymer include very low ESR and elimination of the potentially catastrophic failure mode that may occur with standard tantalum capacitors in a high surge current application.

Features:

- Polymer Cathode Technology
- Low ESR
- High Frequency Cap Retention
- No-Ignition Failure Mode
- EIA Standard Case Sizes
- 100% Surge Current Tested
- 20% tolerance

Electrical Specifications:

- Operating Temperature Range: -55°C to +105°C
- Voltage listed is at 85°C, Derate 25% at 105°C
- Reverse Voltage Rating & Polarity:
  Polymer tantalum capacitors are polar devices and may be permanently damaged or destroyed if connected in the wrong polarity. The positive terminal is identified by a laser-marked stripe and may also include a beveled edge. These capacitors will withstand a small degree of transient voltage reversal for short periods. Please note that these parts may not be operated continuously in reverse.

KEMET

has developed a new type of tantalum capacitor that replaces the solid manganese dioxide electrode with a solid conductive polymer. This product is named the KO-CAP for KEMET Organic Capacitor.
antages of the polymer include very low ESR and elimination of the potentially catastrophic failure mode that may occur with standard tantalum capacitors in a high surge current application.

MET T491 SERIES SOLID TANTALUM CHIP CAPACITORS

's family of solid tantalum chip capacitors is designed and manufactured with the demanding requirements of surface mount technology in mind. These devices extend the advantages of solid tantalum technology to today's surface ircuit applications. Complementing multilayer ceramic chip convenience with capacitance ratings through 1000 µF, tantalum chip capacitors permit circuit designers to take full advantage of the benefits of surface mount technology.

ries are industrial grade solid chip capacitors. The standard solder-coated terminations provide excellent wetting characteristics and compatibility with today's surface mount solder systems. The symmetrical terminations offer total ncy to provide the thermal and mechanical stress relief required in today's technology. Lead frame attachments to the tantalum pellet are made via a microprocessor-controlled welding operation, and a high temperature silver epoxy e system. Standard packaging of these devices is tape and reel in accordance with EIA 481-1. This system provides perfect compatibility with all tape-fed placement units.

fications:

ral Application Class:
tantalum capacitors are usually applied in circuits where the AC component is small ared to the DC component. Typical uses include blocking, by-passing, decoupling, iltering. They are also used in timing circuits. If two of these polar capacitors are ected "back-to-back" (i.e., negative-to-negative or positive-to-positive), the pair may be in AC application (as a non-polar device).

ating Temperature Range: -55°C to +125°C

Operating Temperature Range: -55°C to +125°C

lum capacitors do not lose capacitance from the "de-forming" effect as do liquid-olytic capacitors. Storage at high temperature may cause a small, temporary increase in ge current (measured under standard conditions), but the original value is usually ed within a few minutes after application of rated voltage.

citance: 0.1µF to 1000µF

citance is measured at 120Hz, up to 1.0 volt rms maximum and up to 2.5 volts DC num, at +25°C. DC bias causes only a small reduction in capacitance up to about 2% full rated voltage is applied.

ee:

- s or Exceeds EIA Standard 535BAAC
- l and Reeled per EIA 481-1
- netrical, Compliant Terminations
- nal Gold-plated Terminations
- -marked case
- Surge current test on C, D, X sizes
- Tolerance: ±10%, ± 20%
- Extended Range Values

Application Note:
- A higher voltage capacitor may be used in a lower voltage application.

"ULTRA DIP II" TANTALUM CAPACITORS, 10% TOLERANCE

MET "Ultra Dip II" Series, miniature dipped solid tantalum capacitors, provide the designer with the advantage of compactness plus low leakage and low DF performance characteristics for filtering, bypassing, coupling, blocking and ng circuits. The plastic case provides a tough barrier coating and maintains precision of lead wire spacing within ±0.015 inch. The gold color epoxy utilized permits laser marking with outstanding permanency and legibility. All case e printed with capacitance, voltage, polarity, and vendor identification. Solid tantalum devices exhibit no degradation failure mode during shelf storage and show a constantly decreasing failure rate (i.e., absence of wearout ism) during life tests. The "UltraDip II" Series provides self-insulation cases which are resistant to shock and vibration. These capacitors exhibit low DCL, ESR and Impedance and have excellent temperature stability. Voltages e at 85°C. Derate voltage 33% at 125°C.

e in various lead configuration, tolerances, and packaging. Contact a Mouser Sales Representative for more information.

KEMET "ULTRA DIP II" TANTALUM CAPACITORS, 10% TOLERANCE

The KEMET "Ultra Dip II" Series, miniature dipped solid tantalum capacitors, provide the designer with the advantage of compactness plus low leakage and low DF performance characteristics for filtering, bypassing, coupling, blocking and RC timing circuits. The plastic case provides a tough barrier coating and maintains precision of lead wire spacing within ±0.015 inch. The gold color epoxy utilized permits laser marking with outstanding permanency and legibility. All case sizes are printed with capacitance, voltage, polarity, and vendor identification. Solid tantalum devices exhibit no degradation failure mode during shelf storage and show a constantly decreasing failure rate (i.e., absence of wearout mechanism) during life tests. The "Ultra Dip II" Series provides self-insulation cases which are resistant to shock and vibration. These capacitors exhibit low DCL, ESR and impedance and have excellent temperature stability. Voltage rated at 85°C. Derate voltage 33% at 125°C.

Available in various lead configuration, tolerances, and packaging. Contact a Mouser Sales Representative for more information.

ISHAY 135D WET TANTALUM CAPACITORS

del 135D tantalum-case tantalum electrolytic capacitors incorporate the advantages of all the varieties of ctrolytic capacitors and eliminate most of the disadvantages. These units have a 3 volt reverse voltage pability at +85°C and a higher ripple current capability than any other electrolytic type with similar combinations capacitance and case size. Model 135D capacitors are commercial equivalents of Military Style CLR79 and R81, designed to meet the performance requirements of Military Specification MIL-C-39006/22/25.

Specifications:

CERAMIC RESONATORS

AVX produces a broad range of high quality ceramic resonators. The high quality and extensive coverage of this product line allows optimum design of almost any oscillating circuit.

Ceramic resonators stand between quartz crystal oscillators and LC/RC oscillators in reguard to accuracy but are considerably smaller, require no adjustments, have improved start-up times, and are low in cost.

Features:

- High reliability chip resonator in a ceramic case which can be reflow soldered and washed.
- Ultra-miniature size is suitable for compact equipment high mounting density.
- Excellent frequency stability
- Low profile
- Reflow solderable

DS_9 SERIES DISC TYPE EMIFIL® LEADED EMI SUPPRESSION FILTER

Disc type EMIFIL®, DSS9 and DST9 are T-type EMI suppression filters. The disc-type EMIFIL increases the self-resonant frequency of the capacitor by attaching two lead wires to one of the electrodes of the capacitor and increases the insertion loss by adding inductance to the lead. Frequencies to be suppressed can be selected by choosing the capacitance. They are also recommended for use as by-pass capacitors.

URATA EMI Suppression Filters (EMIFIL®) Chip Ferrite Beads

hip ferrite beads BLM series comprises ferrite bead in the shape of a chip. This ferrite bead generates a high impedance which at high frequency mainly consists of a ance element. The BLM series is effective in circuits without stable ground lines because the BLM series does not need a connection to ground. The nickel barrier structure of ternal electrodes provides excellent solder heat resistance.

NFW31SP Series

The EMI filter NFW31S series consists of high performance EMI suppression filters. They are designed for noise suppression in high speed signal digital circuits in which the signal harmonics are prone to becoming noise sources. These filters achieve a 100dB/dec. (typ.) damping characteristic with Murata's innovative circuit design. This makes these chips effective in applications where the signal and noise frequencies are close to each other.

TRIAD CURRENT SENSE TRANSFORMERS

Designed for switching power supply applications. Triad current sense inductors are used to detect the current passing through a conductor. These inductors are very reliable and operate effectively over the frequency range of 20 kHz-200 kHz. They are constructed of UL rated 130°C materials. Both models are available with a center tap option.

Features:
- Derate ET product by 32% for 50 kHz, 52% for 100 Hz and 50% for unidirectional operation
- Rated primary current renders approximately 40°C temperature rise
- CST206 models have maximum recommended terminating resistance of 1 ohm per turn
- 3 pin or center tapped (CT) models are designed with a T suffix

TRIAD TOROIDAL FILTER INDUCTORS

Triad toroidal inductors are specifically designed to minimize transients. These devices store energy, and there condition the output signal by leveling out the current waveform providing a more stable current supply.

Features:
- Nominal inductance values are typically 10% higher than minimal rating
- Biased inductance measure at rated DC amps
- Operation at rated current yields @ 40°C rise over 20°C ambient

Triad rod core inductors provide cost effective energy storage. By conditioning the output signal, the inductor smoothes out the current waveform to provide a more stable current. These low cost inductors are designed compatible with automated P.C.B. installation.

Features:
- Rated current 10 amps per pin maximum
- Rated current renders @ 40°C temp. rise

Tiny, stiff hooks mesh with pliable loops for quick secure fastening.

Scotchmate™ General Purpose Pressure Sensitve

Simply peel off the liner and press in place. These general purpose products offer high adhesive bond to a wide variety of materials and provide excellent moisture resistance. When supporting static loads, temperature should not exceed 49°C / 120°F to avoid slippage or movement of the fastener in the direction of the static force due to softening of the adhesive. Temperature range is -29°C / -20°F to 49°C / 120°F continuous, to 70°C / 158°F intermittent.

Dual Lock™ General Purpose Pressure Sensitive

3M™ Dual Lock™ Reclosable Fasteners have been used extensively in transportation, electronics, business equipment, machinery, medical and sign and display markets. When the mushroom-shaped stems interlock, t strength is high enough to replace mechanical fasteners in many applications, yet you can readily open and c Dual Lock fasteners hundreds of times. High temperature and solvent resistant. Black, polypropylene reclosab fastener with rubber based pressure sensitive adhesive and works well on many plastic surfaces.

WHAT IS HARMONIZED?

rder to facilitate export trade to the European communities and develop a common European marketplace, an international standards agency called CENELEC was formed to develop electrical andards that would be universally acceptable to all of the CENELEC member nations. According to CENELEC standards, <HAR> wire and cable must be used for all internal wiring and power applications.

P NOMEX INSULATION

TRIP® Jumpers are multi-conductor board-to-board interconnect devices, preplated and ready to use without wire stripping, cutting to length, or solder preparation. They provide a convenient, reliable alternative to conventional point wiring for high density, high-vibration PC board interconnect application. They have a round copper conductor that is rolled flat for high flex life, tin-plated for easy soldering. This round-to-flat design provides vibration-proof y and long life. They are built with exposed end pins, so there is no need to strip insulation from the conductors before making a connection.

erature Rating: 105°C
nt Rating: 3 Amps
ge Rating: 300 VAC
rrangement: Straight end pins
ngth: .125 ± .030

antages include its relatively low cost and its resistance to heat, which enables it to easily withstand all n soldering techniques. However, Nomex can be damaged by environments that include high humidity or he jumper will experience high amounts of abrasion.

TEFLON INSULATION - CONDUCTOR PITCH: .100"

Features:

- Temperature Rating: 125°C
- Current Rating: 3 Amps
- Voltage Rating: 300 VAC
- Pin arrangement: Straight end pins
- Pin length: .125 ± .030

This is a high-performance insulating material. It stands up very well to most ordinary processes and environments. As might be expected with a material famous for providing a non-stick surface, it offers extreme high resistance to abrasion and harsh chemicals. Teflon-covered jumpers can be installed using most common soldering techniques.
